"Knowledge is knowing that a tomato is a fruit; wisdom is knowing not to put it in a fruit salad."

At Reitigh, our team brings together a unique blend of knowledge and wisdom. Our business domain knowledge and data engineering expertise enables us to create and implement efficient solutions tailored to the intricacies of complex processes within financial services firms.

We have decades of collective experience exclusively dedicated to the financial services sector, which has forged an intimate understanding of individuals' actions, motivations, and the challenges they encounter. Drawing from our experiences of problem-solving in this area, we have honed a natural and fluid approach to explore, define, and design solutions with an agile and iterative mindset, enabling our clients to effectively meet and exceed their data processing and management challenges.

Problem being solved

At the core of our identity lies "Réitigh" - a name derived from an Irish verb meaning to solve, to elucidate, and to bring order.

This name perfectly reflects our daily approach of collaborating with our clients to tackle data processing and management challenges: spanning regulatory reporting, financial reporting, and BAU processing. We specialise in breaking down complex processes into simple units of work, and leveraging our low-code framework "IntegraLynx" to configure scalable, automated, and governed applications - empowering our clients to navigate their complexities with ease.

History

Founded in 2016 by three experts in software development and business consulting, Reitigh emerged from first hand experiences with the data management challenges faced by financial services companies. The founders witnessed the struggles of back-office teams in efficiently gathering, processing, and disseminating data for their daily operations. The absence of suitable tools led them to rely on disconnected Excel spreadsheets for data processing, creating a cumbersome and inefficient proliferation of processes.

To address this issue, Reitigh developed "IntegraLynx," a revolutionary low-code application development platform. This innovative tool allows individuals without traditional programming skills to create automated applications tailored to their specific needs. Since its inception, Reitigh has experienced exceptional organic growth and now comprises a team of 25 highly capable problem solvers. Their expertise has been sought after by some of the world's most renowned financial services companies.

In recognition of their remarkable growth and contributions, Reitigh achieved a significant milestone in 2022. They were named the 3rd fastest-growing software company in Ireland at the prestigious Deloitte Technology Fast 50 Awards. This accolade solidifies Reitigh's position as a pioneering force in the software industry, propelling them to new heights in delivering cutting-edge solutions for the financial sector.

The Team
